## ElectrOplex Launches Rocket 90 Guitar Amps

Release date: April 20, 1995

Handcrafted ElectrOplex amplifiers are available in both combo and separate head/speaker configurations, providing guitarists with the best in tone and versatility, whether in the studio, in a club, or on large concert stages.

Designed and handmade in the U.S.A., the ElectrOplex Rocket 90 features advanced all-tube circuitry for the ultimate in tone, power, and reliability. Two switchable channels are individually voiced for warmth and definition. The clean tones are bright and punchy, yet retain all the warmth and harmonic richness only tubes can deliver. Overdrive tones, from subtle to aggressive, sound silky-smooth, never harsh.

The Rocket 90 2x12 combo amplifier delivers 90 watts of power to its pair of Celestion G12T-75 speakers. The open-backed cabinet features rugged plywood construction, recessed side handles, Tolex covering, and metal corners.

The Rocket 90 head is built with the same features as the Rocket 90 combo amplifier, minus the built-in speakers. It is perfect for use with ElectrOplex's 2x12 convertible cabinet and 4x12 sealed speaker enclosures, which are optimized as the ideal complements for either a Rocket 90 head or combo.

The 2x12 convertible cabinet has a removable back that allows you to tailor your sound—choose a closed-back configuration for tighter, focused response with excellent high end, or an open-back configuration for a more expansive sound with extended bass. The 4x12 is optimized for classic lead tone. For incomparable output and tone, they are equipped with Celestion G12T-75 speakers. The 4x12 speaker enclosure is wired for selectable stereo or mono operation.

For more information on ElectrOplex amplifiers, contact ElectrOplex Amplifiers, P.O. Box 35, Brea, CA 92622 USA.
